## FOREWORD

The Kerala State Pollution Control Board (KSPCB) has decided to conduct a study on Single Use Plastic (SUP) in order to identify the manufacturing capacity, availability, and characterization of plastic waste. Socio Economic Unit Foundation (SEUF), the accredited agency of government of Kerala and working in the sector for more than two and half decades is entrusted by KSPCB to conduct market survey and waste characterization as part of the project. The main objective of the survey was i) To inventories SUP in the state and alternatives to SUP used in the state. ii) To carry out market survey to check availability of the items in the three categories iii) To carry out field survey to characterize plastic waste at different littering hot spots, solid waste processing and disposal facilities.

## EXECUTIVE SUMMARY

Plastic is a prime example of a social boon transformed into a curse. Plastic, which was once thought to be a miracle, is now a threat to nature in a number of ways that harm everything from marine life to land resources. Most manmade materials have been overtaken by plastics, which have also long come under environmental scrutiny. However, despite numerous technical developments, there is still no end-of-life for plastic. A total of 8300 million tonnes of polymers, synthetic fibre, and additives were produced between 1950 and 2015; of this total, 4600 million masses (or 55%), were dumped in landfills or otherwise destroyed, 700 million tonnes (or 8%), were burned, and only 500 million tonnes (or 6%) were recycled.

Single-use plastics (SUP), often referred to as disposable plastics, are commonly used for plastic packaging and include items intended to be used only once before being thrown away or recycled. The term "single-use plastics" (SUP), sometimes known as "disposable plastics," refers to materials that are frequently used for plastic packaging and are designed to be used just once before being discarded or recycled. They are non-biodegradable and harmful to the environment, wildlife, and human health. They take years to decompose and then further degrade into smaller plastic fragments known as microplastics that contaminate food, water, and even seas. Therefore, it is essential to develop and implement effective legislation that controls plastics waste on the one hand and promotes alternatives to plastics on the other, especially for a developing nation like India that cannot afford these hazards and contaminations to food and water sources.

In India, with dense population in cities and urban areas, despite of all efforts by Municipal Corporations/Local bodies, source segregation of waste for separation of biodegradable/non-biodegradable/recyclable waste has not been effective so far & the fact is plastics carry bags are used for packing and disposal of all kind of households, stained/soiled food or non-food items and got mixed up with them. If plastics bags or packaging can be sorted or segregated from the source itself for beneficial purposes, the mixed contaminated and comingled waste would not land up at dump yards in cities.

A study entitled "Assessment of Single Use Plastics, Plastic items (Excluding SUP) and SUP alternatives" was conducted in order to evaluate and quantify the generation of plastic waste, particularly single-use plastics, in Kerala. The scope of the work includes processing and disposal facilities for solid waste, as well as assessments and quantifications of plastic waste in the market and hotspots for littering. Socio-Economic Unit Foundation (SEUF), Kerala is in charge of gathering information from field. This report presents the findings of the assessment of single use plastics in Kerala. A professional team from SEUF visited various locations in Kerala to collect data in order to complete the project's objectives. The following list includes the study's key findings.

- 549 plastic manufacturers and 2181 SUP alternatives manufacturers were registered in the state of which 98 palm products manufactures and 1700 paper products manufactures were registered with District Industry Centre (DIC) and 383 manufactures are registered with Kudumbasree.
- Plastic waste assessment was carried out at hotspots for littering, material recovery facilities (MCF), and dump sites in the estimation of the total quantity of plastic waste generated.
- Litter hotspot survey was conducted in 324 locations covering 73 high income families, 146 middle income families, 52 low income families, 8 slums, 9 unauthorised colony and 36 other categories. Carry bags (46%) and plastic cups (21%) comprised the majority of the SUP assessed at litter hotspots.
- As per the proposal, characterization of plastic waste were done for 62 MCF/RRFs. This includes 6 Corporations, one municipality from each district and three Grama Panchayats per district. The characterization showed LDPE materials (30.7 %) HDPE material (17.6 %) and PP material (15.5 %) by weight. PET material (12.2 %) and MLP material (10.7 %) of total plastic waste.
- The average weight of total waste in 1 m<sup>3</sup> volume of total waste in MCF is 49.82 kg out of this, single-use plastic weighed 28.33 kg. Majority of

the SUPs comprises household plastics (61.1 %), Food (40.7 %) and personal care (9 %).

- The average weight of total waste in 1 m<sup>3</sup> volume of total waste in dumpsite is 39.0 kg. Total single-use plastic in this weight is 28.5 kg. Majority of the SUPs comprises Food (51 %), Household (34 %) and personal care (15 %). The characterization of plastic waste indicates that weight of PP materials constitutes 24 % of the total plastic waste, followed by PET material and HDPE material, which amounted to 22 % and 21 % respectively. While LDPE material constituted 13 % of total plastic waste, MLP material was found 9 %.

## 1. Introduction

The study “Assessment of Single Use Plastics, Plastic items (Excluding SUP) and SUP alternatives” funded by Kerala State Pollution Control Board (KSPCB) were conducted all over Kerala. Socio Economic Unit Foundation (SEUF) is entrusted by KSPCB to conduct market survey and waste characterization as part of the project.

### 1.1 Background

With more than 30,000 processing facilities and more than 4 million employees, the Indian market for plastics products has now developed into one of the key industries in the nation's economy. Around 1.5 million metric tonnes of performance plastics were produced in India during the financial year 2021. The ever increasing consumption of plastic products because of their applications in several end uses, has increased the demand for plastic products in India. Also the expanding sectors such as health, pharmaceuticals and others, are significant contributor towards propelling the plastic market, which is classified on the basis of type, class, source and applications. The Indian market is dominated by polyethylene (PE), polyvinyl chloride (PVC), and polypropylene (PP) in terms of the number of applications and products. India's plastics industry supplies materials to a number of important economic sectors, including the automobile, consumer packaging, and electronics industries. These changes over the past few decades have greatly increased the demand for and use of plastics in a variety of contexts.

Large-scale production of plastics, especially the, single-use plastics (SUPs), has led to the *inevitable* increase in plastic waste and litter entry into the environment (Moore, 2008; Bakir et al, 2014). It takes about 500 years for the discarded plastic bags to degrade completely. Plastics pollute the environment and contributes to global warming not just by making garbage disposal and land filling more difficult, but also by generating CO<sub>2</sub> and dioxins when it is burned. Plastic is a toxic pollutant, which can cause dangerous

effects on the marine and terrestrial creatures, as well as on humans. Ingestion of plastic particles may cause physical harm to marine animals and seabirds and also can cause entanglement, starvation, suffocation, infection and drowning in the case of birds and other aquatic organisms. Plastic is estimated to affect at least 267 species worldwide, with statistics showing that plastic affects 86 percent of turtles, 44 percent of seabirds and 43 percent of marine mammals (Laist, 1997). In addition, floating plastics can carry pathogenic microorganisms and dangerous substances over long distances (Mato et al, 2001).

Plastics are highly durable and are persisting in the environment, accumulating year after year from an increasing number of different sources. Due to their buoyancy and resistance to degradation, plastics are ideal marine pollutants which enable debris to travel great distances from source before settlement. Plastic production is hastily rising, with a doubling of production every 11 year since mass production began in 1950s (Plastics Europe, 2013).

Over the last 50 years, plastic materials have rapidly displaced old metal, wood, and leather materials in a range of applications. India consumes roughly 11 kg of plastic per capita annually, and as a big consumer, it generates approximately 26 million metric tonnes of plastic waste annually (Law et al, 2020), putting it in a prominent position in the plastic waste generation community. Ironically, the most valued attribute of plastics, durability, is also a significant environmental concern. Because of their potential to act as vectors for hazardous substances or pathogenic microorganisms, the persistence of plastic debris in the environment, as well as its fragmentation into smaller particles known as microplastics (particles smaller than 5 mm), has raised global concerns.

Kerala is a small state on the Indian subcontinent's south western coast, bordering the Arabian Sea on the west and the Western Ghats mountain range on the east. Kerala's enormous network of rivers, streams, and lakes is well-known. Kerala is a densely populated state (819 people per square kilometer), resulting in enormous amounts of plastic waste; plastic accounts for roughly 4-6 percent of municipal solid waste (MSW) in Kerala

(Scaria, 2013). Many Indian states, including Kerala, lack adequate waste management infrastructure, resulting in garbage piles. Furthermore, Kerala has a long monsoon season (about 4-6 months) each year, which causes plastic debris from landfills to flow into a network of rivers, streams, lakes, and eventually the Arabian Sea (Sruthy and Ramasamy, 2017).

## **1.2 About Socio Economic Unit Foundation (SEUF)**

The Socio Economic Unit Foundation (SEUF) is a Non-Governmental Organization (NGO), established in 1987, has significantly expanded its activities in Rural Water Supply and Sanitation, poverty reduction, livelihood programmes, Women in Development, Capacity building, GIS, Software Development, Research and Consultancies. The organization is working towards the furtherance of the Millennium Development Goals (MDGs).

Over the years, the organization has emerged as a major accredited NGO, networked with Governments, donors, other NGO partners and the civil society. From the programme implementation experience gained over the last two decades, we are in the process of diversifying our activities to the consultancy and GIS support across the country, with specific focus on South India, in our core competency areas of water, environmental sanitation, resource / waste management, poverty reduction and livelihood.

SEUF has been involved in supporting community based water supply and environmental sanitation programmes in Kerala for almost three decades now. SEUF also undertakes research and studies in their core competencies for various national, international agencies as well as state and national governments.

## **1.3 Legal Framework**

The union government issued the Plastic Waste Management Rules in 2011 under the Environment Protection Act of 1986 to regulate the scientific management of plastic wastes in order to address the continuously negative effects of plastic waste generation and its careless disposal. The former

Recycled Plastics Manufacture and Usage Rules, 1999, which were amended in 2003, were superseded by these regulations. The rules 2011 were superseded by the Plastic Waste Management Rules, 2016. These regulations aim to provide a much more all-encompassing approach to successfully address the issues around plastic waste. The Union environment ministry has issued Plastic Waste Management (Second Amendment) Rules, 2022, in view of the phasing out of certain single-use plastic products from July 1 and the mandate to increase the thickness of plastic carry bags to over 120 microns from December 31.

## 1.4 Objectives

The main goals of the study are:

**Objective 1:** To provide list of items namely SUP items (Permitted/prohibited) and alternatives to SUP.

**Objective 2:** To carry out market survey to check availability of these items.

**Objective 3:** To carry out field survey for characterization of plastic waste at different locations covering littering hot spots, solid waste processing and disposal facilities.

## 1.5 Scope

The study was conducted all over Kerala for the assessment of Plastic Products: Single Use Plastic (Permitted/prohibited), Plastic items (Excluding SUP) and SUP alternatives.

## 2. Major objectives

### **Objective 1: To provide list of items in the state with focus on: SUP items (Permitted/Prohibited) and Alternative to SUP**

Single-use plastics are typically items that are discarded after being used only once and do not go through the recycling process. India has banned the manufacture, import, stocking, distribution, sale and use of identified single-use plastic items, which have low utility and high littering potential, all across the country from July 1, 2022. Globally, plastic pollution has emerged as a serious menace in the absence of streamlined plastic waste management (PWM) focusing on reuse, reduction and recycling of plastic waste. The global recycling percentage is low, only 9 per cent, and this calls for immediate and integrated actions to manage plastic globally and focus on recycling or up cycling.

The ban on the manufacture, import, stocking, distribution, sale and use of identified single-use plastic items, which have low utility and high littering potential, has come into force from July 1. The list of banned items includes – ear buds with plastic sticks, plastic sticks for balloons, plastic flags, candy sticks, ice-cream sticks, polystyrene (thermocool) for decoration, plastic plates, cups, glasses, cutlery such as forks, spoons, knives, straw, trays, wrapping or packing films around sweet boxes, invitation cards, cigarette packets, plastic or PVC banners less than 100 micron, stirrers. In India, the Plastic Waste Management Rules of 2016 and 2018 and the recently announced amendment of 2021 focus on single-use plastics. The rules detail the various categories of plastics and recommend recycling methods based on the type of plastic polymer used. The Plastic Waste Management Rules, 2016 and 2018, mention the extended producer responsibility (EPR) approach, which gives producers substantial responsibility (financial and/or physical) for the treatment and disposal of post-consumer plastic waste.

In addition, industries generating plastic waste, commonly known as pre consumer waste, need as much attention as post-consumer waste.

Various manufacturing industries across the globe produce 400 million tonnes of plastic waste per year, with the packaging industry being the largest contributor.

The State Government had banned the manufacture, sale, storage, and transportation of single-use plastic as far back as January 2020. Even as the use of plastic bags seemed to be on the way out, the ban could not be enforced, particularly as COVID-19 reared its head.

The list of banned single-use plastic products in the State includes plastic carry bags irrespective of thickness;

- i. garbage bags;
- ii. non-woven bags, plastic flags and buntings;
- iii. PET/PETE bottles of drinking water of capacities less than 500 ml;
- iv. plastic-coated paper cups, plates, bowls, and paper carry bags;
- v. plastic/plastic-coated leaves used as plates;
- vi. plastic packets (use of plastic packets in retail outlets for packing fruits and vegetables;
- vii. plastic sapling bags;
- viii. plastic sheets used as table spreads;
- ix. plastic water pouches, non-branded plastic juice packets;
- x. plates, cups, and decorations made of thermocol;
- xi. PVC flex materials, plastic-coated cloth;
- xii. And single-use plastic utensils such as cups, plates, spoons, and straw.

This study's main objective was to create a list of SUP items that are permitted (Table 1), prohibited, and alternatives (Table 2). It also involved identifying SUP items that are prohibited under Kerala rule and by MoEFCC PWM rules (2021).

Table 1 List of SUPs permitted

<b>Sl no</b>	<b>SUP permitted</b>
1	Expanded Polystyrene (Thermocol and similar) for decoration
2	Small plastic bottles for drinking water ( $\leq 200\text{ml}$ )
3	Small multilayer pouches/sachets (area less than $36\text{ cm}^2$ )
4	Plastic banners (thickness less than 100 microns)
5	Wrapping films for e-commerce applications
6	Cling films (food and industrial packaging)
7	Bakery and grocery packing films
8	Multi-layer packaging (an area more than $36\text{cm}^2$ )
9	Brick cartons (Tetra Pak and similar)
10	Blister packaging for pharmaceutical applications
11	Blister packaging for non-pharma applications
12	Milk and oil pouches
13	Retort pouches for ready-to-eat microwavable and boiling water food items
14	Shrink film
15	Air cushions industrial packaging: Bubble wraps, Foam, Air Pillows
16	Disposable industrial packaging (EPS)
17	Films for mulch, silage, greenhouse applications
18	Plastic bottles for food and beverages
19	Plastic bottles for non-food
20	Non-woven textile for medical and personal care items
21	IV bottles
22	IV bags/ Blood bags
23	Disposable syringes
24	Catheters
25	Tea-bags

Table 2 Banned plastic items and alternatives

Sl no	Banned items in the state:	Recommended non-plastic substitutes	Remarks
1	Garbage bags (plastic)		G.O. (MS) No.7/2019/Envt. dated 17.12.2019 G.O.(Rt)No.06/2020/ENVT dated 11.05.2020
2	Non-woven bags, plastic flags, plastic bunting	Cloth & paper-bags, flags, bunting	G.O. (MS) No.7/2019/Envt. dated 17.12.2019 G.O.(Ms)No.2/2020/ENVT dated 27.01.2020
3	PET/PETE bottles of drinking water of capacities less than 500 ml.	Banned, no substitute	G.O.(Ms)No.2/2020/ENVT dated 27.01.2020
4	Plastic carry bags irrespective of thickness	Cloth, paper bags ( free from plastic coating )	G.O.(MS) No.7/2019/Envt. dated 17.12.2019 G.O.(Ms)No.2/2020/ENVT dated 27.01.2020 G.O (Ms) No. 4/2020/ENVT dated 16.02.2020
5	Plastic carry bags – compostable		Subject to judgment dated 16/02/2021 on WP (c) No. 4291 of 2020 (J)
6	Plastic coated - items like paper cups,	For paper cups with PLACoating , certified by CPCB	G.O. (MS) No.7/2019/Envt. dated 17.12.2019 G.O.(Ms)No.2/2020/ENVT

	plates, bowl, paper bags	and IS:17088 complaint	dated 27.01.2020
7	Plastic/ plastic coated leaves used as plates		G.O (Ms) No. 4/2020/ENVT dated 16.02.2020
8	Plastic packets (use of plastic packets in retail outlets, including street vendors/ hawkers, for packing fruits and vegetables)	Paper and cloth bags	G.O. (MS) No.7/2019/Envt. dated 17.12.2019 G.O.(Ms)No.2/2020/ENVT dated 27.01.2020
9	Plastic sapling bags	Substituted with non-plastic materials. For grow bags, compostable materials can be used	G.O (Ms) No. 4/2020/ENVT dated 16.02.2020
10	Plastic sheets (sheet used as table spread)	Paper spread	G.O. (MS) No.7/2019/Envt. dated 17.12.2019 G.O.(Ms)No.2/2020/ENVT dated 27.01.2020
11	Plastic water pouches, non branded plastic juice packets	Banned , no substitute *(Branded plastic juice	G.O. (MS) No.7/2019/Envt. dated 17.12.2019 G.O.(Ms)No.2/2020/ENVT dated 27.01.2020

		packets will come under EPR regulations)	
12	Plates, cups and decorative materials made of thermocol/ Styrofoam	Glass, ceramic , steel- cups, plates, paper and plant-based decorations	G.O. (MS) No.7/2019/Envvt. dated 17.12.2019 G.O.(Ms)No.2/2020/ENVVT dated 27.01.2020
13	PVC flex materials, plastic coated cloth like polyster/ nylon/ Korean cloth	only cloth (plastic free) or paper (plastic free) or polyethylene material	GO(Rt) No.111/2019/LSGD dated 29.08.2019 G.O (Ms) No. 4/2020/ENVVT dated 16.02.2020
14	Single use plastic utensils like cups, plates, dishes, spoons, fork, straw, stirrer, made of plastic	Glass, ceramic , steel, wooden cups, plates, dishes, spoons, fork, straw, stirrer *(all product attached straws, and other such items part of branded product packaging exempted from ban and come under EPR)	G.O.(Ms)No.2/2020/ENVVT dated 27.01.2020 G.O (Ms) No. 4/2020/ENVVT dated 16.02.2020
15	Garbage bag, non woven bags, PET bottles, carry bags,	Paper and cloth bags, Glass, ceramic , steel,	G.O.(Ms)No.6/2022/ENVVT dated 29.10.2022

	plastic sapling bags, cups, plates	wooden cups, plates, dishes, spoons, fork, straw, stirrer	
--	---------------------------------------	--	--

**Objective 2: To carry out market survey to check availability of the items in the three categories (SUP (permitted), SUP items (banned), alternative to SUP).**

**Sub Objectives**

- (i) To understand Manufacturing capacity
- (ii) Market assessment along with Field survey needs to be carried out. The details were obtained from District Industries Department, Plastic Associations, and Pollution Control Board.

**A.1 Manufacturing capacity**

All facilities dealing in plastics need to have license registration and consent to operate from Pollution Control Board. Various approaches were carried out for accessing the availability of SUP in marketplace.

1. Estimated the scale of production of plastics, and collect the details of plastic Manufacturers/recyclers.
2. Collected the details of production of plastics i.e. production capacity, actual production, producing items in the State.
3. State wise list of registered manufacturers of SUPs and other plastic items were collected from corresponding District Office of Pollution Control Board.
4. Simultaneously manufacturers of SUP alternatives were collected from District Industries Centre (DIC).
5. Collected details from: Kerala Plastic Manufacturers Association (KPMA), Plastic Recyclers Industrial Association (PRIA) - to get data from recyclers to understand the list of dealers of plastic in the state.

## Result

549 suppliers of plastic goods were authorised by KSPCB to operate in Kerala (Table 3). Only 11 suppliers of single-use plastics are included in this list (Table 4).

Table 3 Total number of suppliers of plastic products permitted by PCB

**Total number of suppliers of SUP alternatives**

A total of 2181 SUP alternatives manufacturers were registered in the state. From that 98 palm products manufactures (Table 5) and 1700 paper products manufactures (Table 6) were registered with district industry centre (DIC). 383 manufactures registered with Kudumbasree (Table 7).

## A.2 Market Assessment and Field Survey

Market survey were carried out in all six corporations, two municipalities in each district and five grama panchayats in each district (Table 8 and 9). The study proposed 110 markets and 690 shops for market survey while the team studied 705 shops for the survey. Various establishments namely hotels, super markets, provision stores, vegetable/fruit shop, railway station, bus stand etc are also surveyed.

Table 8 Proposed locations for market survey

## A.3 Mobile app for data collection and survey

KoBo Toolbox app were customized for the study. It is a free open-source tool for mobile data collection, available to all. It allows collecting data in the field using mobile devices such as mobile phones or tablets, as well as with paper or computers. It is being continuously improved and optimized particularly for the use of humanitarian actors in emergencies and difficult field environments, in support of needs assessments, monitoring, and other data collection activities. On March 29<sup>th</sup>, 2022, team members were trained on how to use the KoBo toolbox app and market survey was conducted on May 2022.

A total of 100 Stockists, 344 Retailers, and 262 Local Shopkeepers were surveyed as part of this study to assess the marketability of SUP. 78 stockists out of 100 keep SUPs in their shops. While there are plastic alternatives in 49 stores. 295 out of 344 retailers keep SUPs in their shops. While there are plastic substitutes in 169 shops. 227 local shopkeepers out of 262 kept SUPs in their stores. While there are plastic substitutes in 117 stores. Majority of the SUP products were procuring from local markets or nearby states (Table 11).

Table 11 Availability of SUP in Market

### USAGE AT MAJOR COMMERCIAL SECTIONS

Major commercial establishments like restaurants, Academic institutions, Shopping Complexes, Hotels, Super markets, Provision stores, Vegetable/fruit shops, Tourist Locations, Cinema etc (Table 12) were surveyed for the availability of SUPs. The majority of commercial sectors use SUP products for packaging and selling in their stores. SUP alternatives like cloth bags, paper bags, paper straws are also available in majority of the commercial establishments.

### **Objective 3: To carry out field survey for characterization of plastic waste at different locations covering littering hot spots, solid waste processing and disposal facilities**

Plastic waste assessment was carried out at hotspots for littering, material recovery facilities (MCF), and dump sites in the estimation of the total quantity of plastic waste generated (estimation of the total volume of input plastic in the state and how much of it is converted to waste plastic with characterization and suggestions regarding disposal measures).

## B.1 Littering hotspots

As per the proposal, litter survey was done for a total of 212 locations (Table 13, 30 from Corporations, 56 from municipalities and 126 from grama panchayaths). Areas like High Income, Middle Income, low income and Slum area, unauthorized/ regularized colony & unauthorized colony were covered. Hot spots include public places, tourism destinations, and water bodies etc. Beaches, hotspots near drains or rivers were also mapped. Litter survey were also conducted for houseboats, fishing points, boat jettys, public places etc. The Kobo Toolbox app was used to perform the field survey for the litter hotspot assessment. The plastic waste were characterised as PET bottles, HDPE/PE bottles, Polystyrene, MLP, Carry bag, Miscellaneous plastic, Plastic Cup, Paper and Paper Board, Glass Articles, Aluminium/tin/steel, ceramic/porcelain, Construction/Demolition Waste, Biomedical Waste, E waste and Batteries.

Table 13 proposed locations for litter hotspot study

No	Proposed Locations	Locations
1	6 Corporations in the state	30
2	Two Municipalities per district (28 ULBs)	56
3	3 GPs per district (42)	126
	<b>Total</b>	<b>212</b>

### B.1.2 Results

Litter hotspot survey was conducted in 324 locations covering 73 high incomes, 146 middle incomes, 52 low incomes, 8 slums, 9 unauthorised colony and 36 other categories (Table 14).

Table 14 Litter hotspot survey locations

Category	Number of samples
High income	73
Middle income	146
Low income	52
slum	8
Unauthorized colony	9
Others	36
Total	<b>324</b>

Carry bags made up the majority of the SUP surveyed at litter hotspots (46%) and were followed by plastic cups (21%) (Annexure 1). Figure 1 shows the percentage availability of single use plastics in litter hotspots. Litter hotspots from different locations were shown in figure 2.

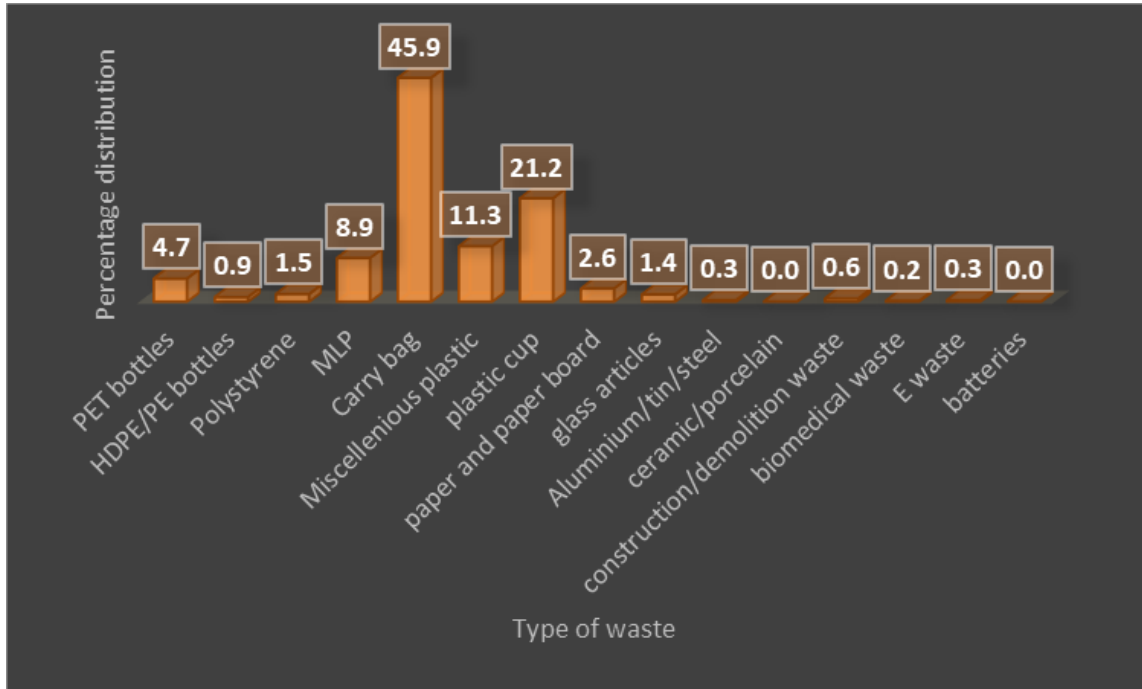

Figure 1 Percentage availability of single use plastics in litter hotspots

Figure 2 Litter hotspots from different locations

## B.2 Solid waste processing and disposal facilities

As per the proposal, characterization was done for 62 MCF/RRFs (Table 15). This includes 6 Corporations, one municipality in each district and three grama panchayats per district.

Table 15 proposed locations for MCF study

No	Proposed Locations	MCF / RRF
1	6 Corporations in the state	6
2	One Municipality per district (14 ULBs)	14
3	3 GPs per district (42)	42
<b>Total</b>		<b>62</b>

### B.2.1 Methodology

The methodology given in the KSPCB report (February, 2022), has been followed for quantification and characterization of plastic waste from the total solid waste. To understand the proliferation of problematic plastic packaging in the environment, the brand audits study was also done to record the brand and identify the manufacturer. These are categorized into product types (food, household and personal care), and type of plastics as well as the domestic, national and international brands. This will also assist in the process of enforcing EPR in the state.

For the characterization of plastics, 1 m<sup>3</sup> volume of mixed waste were taken from the locations for assessing the total weight and then segregated the same into various categories:

- a. Plastic
- b. Textile
- c. Rubber/ Leather
- d. Glass
- e. Paper/Cardboard
- f. Metal
- g. Others

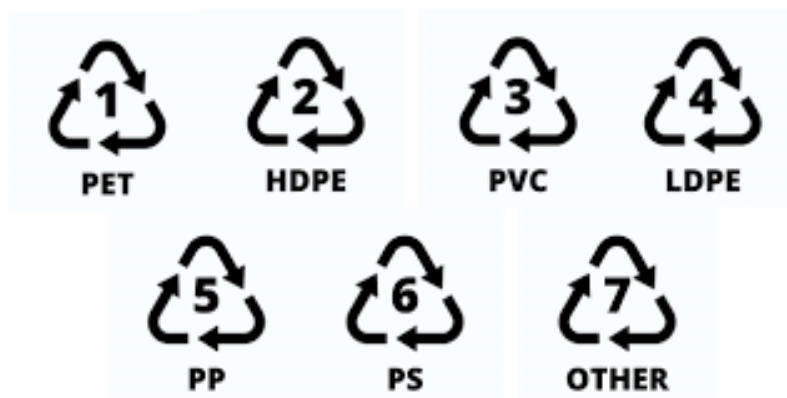

Then weight of each category was measured.

### B.2.1.1 Assessment and Characterization of plastic waste

The protocol of ASTM D 5231-92 (Reapproved 2003) were followed for sampling for quantification of plastic waste from the total solid waste for major locations.

The plastics constitute two major categories: (i) Thermoplastics and (ii) Thermoset plastics. The plastics materials are categorized in seven types based on properties and applications. In order to make the recycling easier, the universally accepted standards has been developed to help consumers to identify and sort out the main types of plastics with marking code. The symbols defined by society of the plastic industry (SPI) USA are adopted as IS 14534:1998 of BIS are as follows:

From the sampled 1 m<sup>3</sup> volume of waste, the various types of plastics like PET, PE Based LDPE, HDPE, PVC, PP, PS and Other has been sorted out and segregated. Finally the segregated plastics are weighed and quantified.

### B.2.2 Results

The average weight of total waste in 1 m<sup>3</sup> volume of total waste is 49.82 kg. Total single-use plastic in this weight is 28.33 kg. Majority of the SUPs comprises household plastics (61.1 %), Food (40.7 %) and personal care (9 %). Figure 3 shows the weight and count of various categories of SUPs in MCF's.

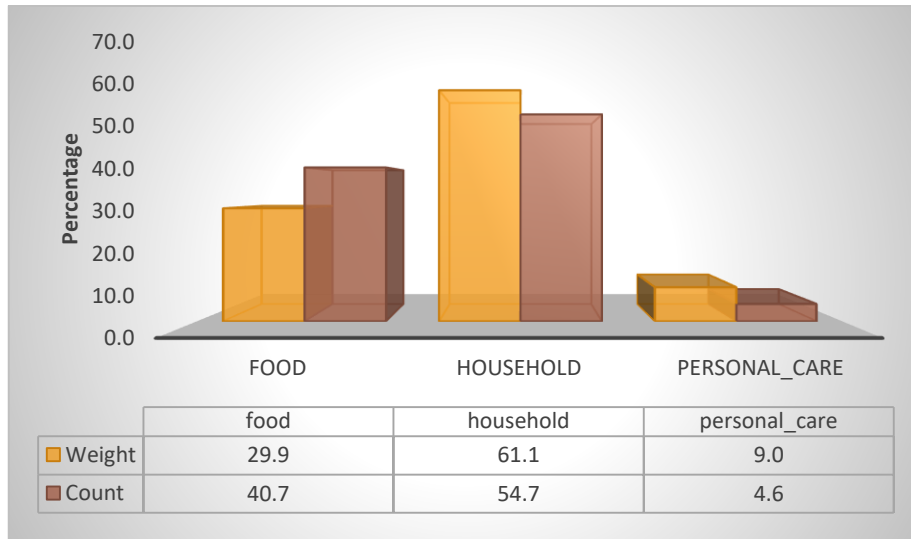

Figure 3 Weight and count of various categories of SUPs in MCF's.

Plastic comprises the majority of the portions in MCF waste (57.5 %) followed by other compounds and textiles (Table 16).percentage weight and count of waste in MCF were shown in Figure 4.

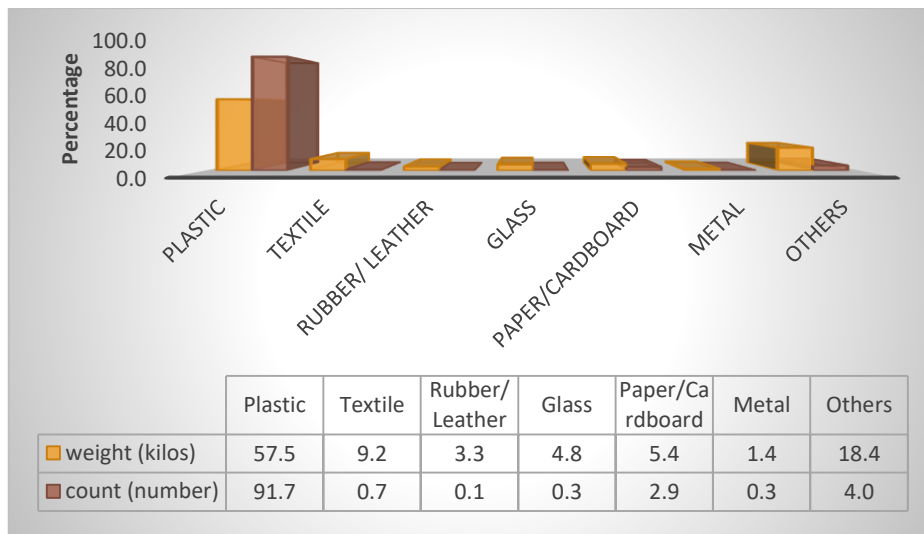

Figure 4 percentage weight and count of waste in MCF

Table 16 Average weight and count of waste in studied MCF's

sl no	Type	Count (number)	Weight (kilos)
1	Plastic	4616.2	28.4
2	Textile	34.3	4.6
3	Rubber/ Leather	5.8	1.6
4	Glass	17.1	2.4
5	Paper/Cardboard	144.4	2.7
6	Metal	15.1	0.7
7	Others	203.5	9.1
<b>Total</b>		<b>5036.5</b>	<b>49.4</b>

The data reveals that the Low-density polyethylene (LDPE) corresponds to the identification code “4” is about 30.7%, High density Polyethylene (HDPE) is about 17.6, Polypropylene (PP) is about 15.5%, Multi Layered Packaging (MLP) is about 10.7%, others unclassified plastics/ Non-Recycling plastics is about 6.6%, Polyvinyl Chloride (PVC) Corresponds to the identification code “3” is about 3.6% and Polystyrene (PS) Corresponds to the identification code “6” is about 3.1% (Table 17). Waste characterization study at MCFs was shown in figure 5.

Table 17 Types of SUPs in MCF

Type of SUPs	Weight (%)	Count (%)
PET	12.2	8.2
HDPE	17.6	4.1
PVC	3.6	0.3
LDPE	30.7	56.8
PP	15.5	9.5
PS	3.1	2.5
MLPs	10.7	12.6
others	6.6	6.0

The present study on Assessment and quantification of plastics waste generation in Kerala suggests that out of total plastics Waste weight, thermoplastics content is about 93.3% ( RECYCLABLE) and rest 06.3 % belong to family of others including thermoset plastics ( Non-Recyclable).

Figure 5 Waste characterization study at MCF's

### **B.2.1.2 Assess the brands of the collected plastics at solid waste processing and disposal facilities**

Based on the volume of input plastic in the state, retailers/ distributors of various prominent brands were surveyed on sample size basis and data thus collected were collated and extrapolated to estimate/ quantify plastic, which were converted into waste. To understand the proliferation of problematic plastic packaging in the environment, the brand audits study

need to record the brand and identify the manufacturer. These were categorised into product types (food, household and personal care), and type of plastic packaging as well as the domestic, national and international brands.

### B.2.3 Result

To understand the proliferation of problematic plastic packaging in the environment, the brand audits have done in MCFs. The random samples of branded plastics were audited to record the brand and identify the manufacturer. Majority of the brands belongs to national (63.4 % of total weight) followed by local (29.2 % of total weight). International brands apart from above materials constituted 7.5% (Table 18). Details of major brands identified from MCF's are represented in Table 19. Waste characterization of SUPs in MCFs shown in figure 6.

Table 18 Brand types of SUPs in MCF

There is a need to strictly implement the comprehensive Extended Producer Responsibility (EPR) policy that will clearly identify accountability and responsibility all through the life of a product. Interventions at different stages of the production and waste management systems will influence the value and quality of plastics and determine its reusability and recyclability.

Figure 6 Waste characterization of SUPs in MCFs

### 3. Dumpsite study

In many countries, open dumping is considered the simplest, cheapest, and most cost-effective way of managing solid wastes. Thus, in underdeveloped economies, Municipal Solid Wastes (MSW) are openly dumped. Improper waste disposal causes air, water, and soil pollution, impairing soil permeability and blockage of the drainage system. Kerala generates around 11,449 tonnes of solid waste per day, of which around 3,521 tonnes is generated in urban areas and 7,928 tonnes in rural areas. The local bodies in Kerala are struggling to ensure scientific disposal of garbage owing to lack of infrastructure and a proper end-to-end system. There are no "live dump sites" in Kerala. In various regions of the state, 44 historical legacy dumpsites were located, of which 18 have been cleaned up. In the remaining 26 disposal sites, the bio-mining process for legacy waste is moving forward at varying stages.

The state government of Kerala launched the project Harithakeralam to make the entire state clean in all fundamental ways. Members of Haritha Karma Senas in all local bodies in the district were trained on collection and segregation of waste under the aegis of the Haritha Keralam Mission, Suchitwa Mission, Kudumbashree Mission and Clean Kerala Company. Due to rigorous regulations, ancient dump sites in Kerala were actively being removed. Additionally, local organisations helped with the sorting, moving, and recycling of plastics. Therefore, only four dumpsites were found in this study to characterise.

#### 3.1 Methodology

The ASTM Method (D5231-92) method has been referred as guiding principle for assessment and quantification of plastics waste at Dump sites. Accordingly, this methodology was adopted to assess samples of fresh Municipal Solid waste (MSW) arriving at dumpsites on different days from different sources in vehicles like trucks/lorry. 1 m<sup>3</sup> volume of municipal solid waste was collected from the locations and assessed the total weight and then segregated the same into various categories like packaging for foods, household goods, and personal care. Further they were characterized into

Plastic, Textile, Rubber/ Leather, Glass, Paper/Cardboard, Metal and other wastes. From the sampled waste, the various types of single use plastics like PET, PE Based LDPE, HDPE, PVC, PP, PS and Other has been sorted out and segregated. Finally the segregated plastics are weighed and quantified. Brands of the collected plastics (International / National / Local) were also assessed and recorded the quantity of each category.

### 3.2 Results

The average weight of total waste in 1 m<sup>3</sup> volume of total waste is 39.0 kg. Total single-use plastic in this waste is 28.5 kg. The majority of SUPs are used to package foods (51%), household goods (34%), and personal care products (15%). Figure 7 shows the weight and count of various categories of SUPs in dumpsites.

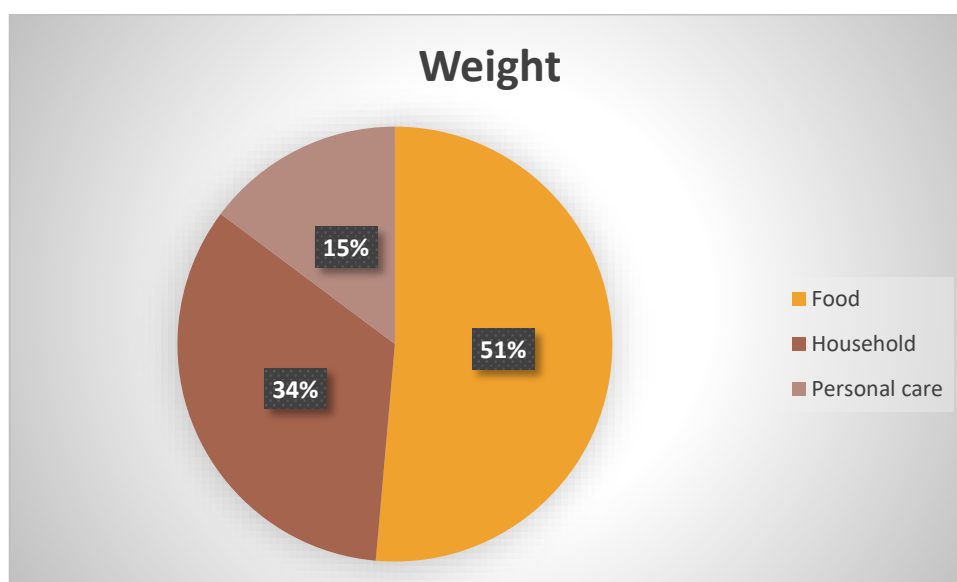

Figure 7 Weight and count of various categories of SUPs in dumpsites

Plastic comprises the majority of the portions in waste dumpsite (57 %) followed by paper/ cardboard (29 %) (Figure 8).

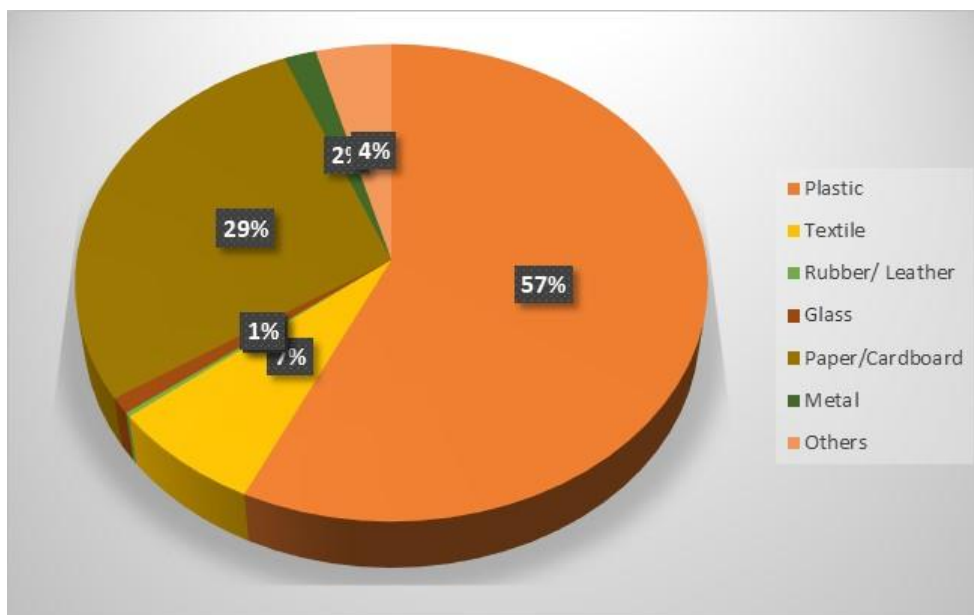

Figure 8 percentage of waste compounds in dumpsites

Table 20 Average weight and count of waste in studied dumpsites

Sl no	Type	Weight (kilos)	Count (number)

The characterization of plastic waste indicates that weight of PP materials constitutes 24 % of the total plastic waste, followed by PET material and HDPE material, which amounted to 22 % and 21 % respectively (Figure 9). While LDPE material constituted 13 % of total plastic waste, MLP material was found 9 % (Table 21).

### 3.3 Dumpsite Brand Audit

To understand the proliferation of problematic plastic packaging in the environment, the brand audits have done in dumpsites. As per this report the random samples of branded plastics were audited to record the brand and identify the manufacturer. Majority of the brands belongs to national (72 % of total weight) followed by local (16 % of total weight). International brands apart from above materials constituted 12% (Figure 11). Details of major brands identified from dumpsites are noted in Table 22.

## 4. Conclusion

The Assessment and Characterization of Plastic Waste in Kerala as illustrated in this report can be summed-up to following conclusion:

- Kerala has a very minimal number of registered single-use plastic manufacturers. However, SUPs make up the majority of the solid waste in MCF and dumpsites. This can be due to unauthorised production or the importation of certain goods from neighbouring states. Checkpoints and careful surveillance of unlicensed SUP manufacturers are required.
- Plastic substitutes were used in half of the stores assessed. While the remainder of them continue to pack and sell using SUPs. The availability in shops is constrained by a lack of knowledge and expensive alternatives.

- The characterization of plastic waste indicates that LDPE constitutes majority in MCF and PP in dumpsites.
- Majority of the brands belongs to followed by local in both MCF and dumpsites.

## 5. Recommendations

- As plastic usage has skyrocketed recently, the careless disposal and littering of plastic waste is having a wide range of negative effects on the ecosystem. Local authorities always face difficulties in fully implementing and enforcing the Plastic Waste Management Rules 2016, modified 2018, as a whole. The following policy suggestions may be considered in order to develop effective methods of managing plastic waste:
- In accordance with the Plastic Waste Management Rules-2016 (amended 2018), local authorities and municipal corporations must develop an implementation procedure/standard operating procedure (SOP) for managing plastic waste that ensures door-to-door segregation of dry and wet waste as well as at all locations.
- The development and optimization of the ward-based material recovery facilities (MRF) is required for maximum performance. If possible, it would be beneficial to integrate MRF with Extended Producer Responsibility (EPR) in order to further the development of the circular economy model.
- Producers and brand owners must work together with local governments/municipalities to develop an EPR plan and the processes for a successful implementation.
- Sustainable alternatives to reduce plastic waste are available by bio-based biodegradable plastics. Particularly in large-scale applications like the production of agricultural mulch films, superabsorbent composites used for waste water treatment, and prolonged release of pesticides, the use of biodegradable plastic must be encouraged. Through the promotion of research and industry partnership, these goods also need to be scaled up and commercialised.

- It would be more appropriate to undertake capacity building programmes for stakeholders on a regular basis to exchange best practises globally in areas of plastic waste management in order to establish an atmosphere that is conducive to the implementation of laws and procedures.
